

(From "RECORDS of AUSTRALIAN MUSEUM," Vol. II., 1892.)

DESCRIPTIONS OF THREE NEW AUSTRALIAN
LIZARDS.

By J. DOUGLAS OGILBY.

1. *GYMNODACTYLUS SPHYRURUS*, *sp. nov.*

Head rather large ; a strong transverse ridge crosses the occiput immediately behind the eyes, ending on either side in a blunt point placed at the postero-superior angle of the orbit ; from this runs forward an inwardly curved, elevated, supraciliary ridge which is continued on the snout by a conversely curved angular canthus rostralis ; these ridges form the margin on the forehead of an oval, and between the orbits of a subtriangular, depression ; loreal region concave ; the length of the snout is one and two-fifths
